

Controlled Lens Motor CLM-4

Main Features

- Affordable and flexible lens motor
- Small and quiet
- Additional mounting options
- Various gear modules
- Detachable motor cable for easy exchange on set
- Adjustable clamp console

Flexible and affordable, the CLM-4 is a compact and lightweight lens motor with a set of four different gear modules. It is faster and quieter than the CLM-2. The CLM-4 will prove especially useful in tight situations with limited space, since the gear modules can be mounted either side of the motor.

The motor offers rod-to-rod mounting options, a Hill Bracket rosette, as well as the standard rod bracket. The clamp console is adjustable and, crucially, the motor cable is detachable, allowing quick and easy on-set maintenance and trouble-shooting.

Controlled Lens Motor CLM-4 basic set
